Installation guide for PrestaCoder Free Theme

****

Email: contact@prestacoder.com   website: http://prestacoder.com

****

Thank you for downloading our free Prestashop theme.

Currently this is a light version of the theme, because Prestashop forum user guidelines force us to place the theme under attachment (with a limited space).

If you would like to download the full theme, including the design files, documentation and all the features of it, I invite you to visit this page

http://prestacoder.com/prestashop-themes/free-prestashop-theme

Subscribe and then the full theme will be sent via email.

Installation of the theme

In order to install this theme properly, open the folder called "theme_files" and upload the folders "modules" and "theme" on the root of your website.

Once the folders are uploaded, go to Prestashop back office and from the top menu select **Preferences > Themes**. Here select Prestacoder theme and click on the save button.

The new theme should be active now. In order to make sure the theme looks as it can be seen on our demo website, please make sure you have the following modules activated / deactivated: http://prestacoder.com/promo/module_list.jpg

After the module was checked, please make sure you have the modules on the right position, as it can be seen here:

http://prestacoder.com/promo/module_positions.jpg

 Thanks again for downloading this theme, to download full version, including design source files (to modify the theme as you'd like), please visit this url: http://prestacoder.com/prestashop-themes/free-prestashop-theme
